Spindex Acquires SuperSeal Technology, Marking its Entry into the Semiconductor Industry

Singapore, 11 September 2026 – PrimeMovers Equity (“PME”), a Singapore-based private equity investment firm, today announced that Spindex Industries Limited (“**Spindex**” or “**the Company**”), a portfolio company of PME, has signed a purchase agreement to acquire the intellectual property rights to SuperSeal (“**SuperSeal**”), a patent-pending metal sealing technology from Global Intercon LLC (“**Global Intercon**”). The acquisition marks Spindex’s entry into the semiconductor industry, particularly in wafer fabrication equipment (“**WFE**”) gas delivery systems. Terms of the transaction were not disclosed.

Gas delivery systems are a critical part of semiconductor wafer fabrication, requiring the precise and reliable delivery of ultra-high-purity process gases under increasingly demanding operating conditions. SuperSeal is a proprietary surface-mount metal sealing technology engineered to address critical sealing challenges, including leak integrity and performance at elevated temperatures. Its protected sealing surface and progressive compression design are intended to provide consistent, reliable sealing performance for demanding semiconductor gas delivery applications.

Nicholas Tan, Managing Director of Spindex, said: “The acquisition of SuperSeal marks an important milestone in Spindex’s strategic entry into the semiconductor industry, adding differentiated technology and intellectual property to our portfolio. We believe SuperSeal provides a strong foundation from which to develop our semiconductor capabilities, deepen engagement with leading industry customers, and pursue additional technology opportunities. This acquisition represents an important step in our strategy to drive technology-led expansion, broaden our customer relationships, and create sustainable long-term growth.”

Fred Rezaei, Managing Director of Global Intercon and inventor of SuperSeal, added: “SuperSeal was developed to address a critical requirement in semiconductor gas delivery systems: achieving reliable, repeatable sealing performance as semiconductor manufacturing processes become increasingly demanding. I am pleased to see the technology enter its next stage of development with Spindex. With its established precision manufacturing capabilities and commitment to the semiconductor market, I believe Spindex is well positioned to industrialize and commercialize SuperSeal and establish the technology with leading wafer-fab equipment manufacturers.”

“This transaction marks the start of Spindex’s transformation from a precision engineering manufacturer into a technology solutions provider,” said Soo Jin Goh, Co-Founder and CEO of PrimeMovers Equity. “Consistent with our GTO™ framework, we are backing Spindex to accelerate growth organically and through strategic acquisitions. SuperSeal is the first of several acquisitions we intend to pursue with Spindex management team.”

The transaction follows PrimeMovers Equity’s privatization of Spindex in 1Q 2026. PrimeMovers Equity remains committed to pursuing both new platform investments and transformational acquisitions to strengthen and scale its portfolio companies in the region.

About PrimeMovers Equity

PrimeMovers Equity is a Singapore-based private equity investment management firm that actively works with management teams in the mid-market segment in Southeast Asia by way of its Growth and Transformation through Operations (GTO™) framework. The firm is led by co-founders, Soo Jin Goh and Randy Teo, who have worked together for over a decade, and each of whom possesses more than 20 years of industry and private equity experience. PrimeMovers Equity is licensed by the Monetary Authority of Singapore (Capital Markets Services Licence No. 101254). For more information, please visit <https://www.primemoversequity.com> or contact info@primemoversequity.com.

About Spindex

Spindex Industries Limited is a Singapore-headquartered precision engineering company with more than 40 years of experience serving global customers. The company offers end-to-end manufacturing capabilities including die casting, injection moulding, machining, grinding, milling, heat treatment, deburring, surface treatment, cleaning, and product sub-assembly. Spindex supplies custom precision engineering components to a diverse range of high-growth industries such as automotive, consumer products, office automation, medical and semiconductor. For more information, please visit www.spindex.com.sg.

About Global Intercon

Global Intercon LLC is a US-based international consulting company focused on supporting client growth, improving internal processes, and advancing manufacturing capabilities across the semiconductor, aerospace, and advanced manufacturing sectors. For more information, please visit www.globalintercon.com.
